Product name:

Linear joint seals

Classification report No.:

NP-02491.1/2009/MŁ

Issue number:

1

Date of issue:

2010.02.22

This classification report consists of twelve pages and may only be used or reproduced in its entirety. Appendix No. 1 to this classification report consists of thirteen pages.

Regon: 000063650

Bank: BPH S.A. O/Warszawa, al. Jerozolimskie 27, 00-508 Warszawa, POLAND, Account no: PLN - 87 1060 0076 0000 3210 0016 6236, EUR - 43 1060 0076 0000 3210 0016 6252

#### 1. Introduction

This classification report defines the resistance to fire classification assigned to the elements – SOUDAL linear joint seals in accordance with the procedures given in EN 13501-2:2007.

### 2. Details of classified product

#### 2.1. General

The element, SOUDAL linear joint seal is defined as vertical and horizontal linear joints seals in vertical building supporting construction.

#### 2.2. Description

The element, linear joint seals of SOUDAL Company is fully described below.

Linear joint seals are made of:

- SOUDASEAL FR neutral, elastic, one-component sealant based on hybrid polymer technology,
- PU Backing Rod,
- FIRESILICONE FR neutral, elastic, one-component sealant based on silicones,
- FIRECRYL FR plasto-elastic one-component joint sealant based on acrylic dispersion,
- SOUDAFOAM FR one-component, selfexpanding, ready to use polyurethane foam with propellants which are completely harmless to the ozone layer,
- MINERAL WOOL 80 stone mineral wool plates wool density 80 kg/m<sup>3</sup>.

Details of the joint seals constructions are shown in figures No. 1-14 in Appendix 1.

# 3. Test reports/extended application reports and test results in support of the classification

# 3.1. Test reports/extended application reports

Name of Laboratory	Name of sponsor	Report ref. no	Test method
Fire Research Laboratory of Building Research Institute	SOUDAL Sp. z o.o.	LP-02491.1/09	EN 1366-4:2006

# 3.2. Test results

Test method, number and date	Parameter	Results							
EN 1366-4:2006 LP-02491.1/09 09.12.2009	Linear joint seal <b>Type A – see Fig. 1 in Appendix 1</b> Orientation – vertical joint in vertical building supporting construction - width of joint – <b>W = 30 mm</b>								
30112.2005	supporting construction integrity	G = 11,5 cm thick wall made of aerated concrete blocks							
	cotton pad gap gauges sustained flaming	158 minutes no failure 158 minutes no failure 158 minutes no failure							
	insulation	123 minutes							
	Linear joint seal <b>Type B – see Fig. 2 in Appendix 1</b> Orientation – vertical joint in vertical building supporting construction - width of joint – <b>W = 20 mm</b>								
	supporting construction integrity	G = 11,5 cm thick wall made of aerated concrete blocks							
	cotton pad gap gauges sustained flaming	158 minutes no failure 158 minutes no failure 158 minutes no failure							
	insulation	70 minutes							

Linear joint seal Type C see Fig. 3 in Orientation vertical joint in vertical building	Appendix 1 supporting construction				
- width of joint - W = 25 mm					
supporting construction	G = 11,5 cm thick wall made of aerated concrete blocks				
integrity					
cotton pad	158 minutes no failure				
gap gauges	158 minutes no failure				
sustained flaming	158 minutes no failure				
insulation	89 minutes				
Linear joint seal Type D - see Fig. 4 in A Orientation - vertical joint in vertical building	Appendix 1 supporting construction				
- width of joint - W = 40 mm					
supporting construction	G = 11,5 cm thick wall made of aerated conerete blocks				
integrity					
cotton pad	158 minutes no failure				
gap gauges	158 minutes no failure				

158 minutes no failure											
158 minutes no failure											
Linear joint seal Type D' – see Fig. 4 in Appendix 1 Orientation – vertical joint in vertical building supporting construction											
⊬ width of joint – <b>W</b> = 50 mm											
G = 11,5 cm thick wall made of aerated concrete blocks											
71 minutes											
71 minutes											
71 minutes no failure											
70 minutes											
Appendix 1 supporting construction											
G = 11,5 cm thick wall made of aerated concrete blocks											
158 minutes no failure											
158 minutes no failure											
158 minutes no failure											
129 minutes											

Linear joint seal Type F - see Fig. 6 in A Orientation - vertical joint in vertical building	Appendix 1 supporting construction				
- width of joint - W = 30 mm					
supporting construction	G = 11,5 cm thick wall made of aerated concrete blocks				
integrity					
cotton pad	148 minutes				
gap gajiges	148 minutes				
sustained flaming	148 minutes no failure				
insulation	135 minutes				
Linear joint seal <b>Type G – see Fig. 7 in /</b> Orientation – vertical joint in vertical building	Appendix 1 supporting construction				
- width of joint - W = 20 mm					
supporting construction	G = 11,5 cm thick wall made of aerated concrete blocks				
integrity					
cotton pad	118 minut <del>e</del> s				
gap gauges	118 minutes				
sustained flaming	118 minutes no failure				

insulation	70 minutes										
Linear joint seal Type H – see Fig. 8 in Appendix 1 Orientation – vertical joint in vertical building supporting construction											
- width of joint - W = 60 mm											
supporting construction  G = 11,5 cm thick wall made of aerated concrete blocks											
integrity											
cotton pad	129 minutes no failure										
gap gauges	129 minutes										
sustained flaming	129 minutes										
insulation	68 minutes										
Linear joint seal Type I – see Fig. 9 in A Orientation – vertical joint in vertical building	ppendix 1 supporting construction										
- width of joint - <b>W</b> = 100 mm	·. *										
supporting construction	G = 11,5 cm thick wall made of aerated concrete blocks										
integrity											
cotton pad	158 minutes no fallure										
gap gauges	158 minutes no failure										
sustained flaming	158 minutes no făilure										
insulation	158 minutes no failure										

Linear joint seal Ty Orientation – horizon	vpe J – see Fig. 10 in Ital joint in vertical buildi	Appendix 1 ng supporting construction					
- width of joint - W	= 20 mm						
supporting consti	ruction	G = 11,5 cm thick wall made of aerated concrete blocks					
integrity							
	cotton pad	158 minutes no failure					
	gap gauges	158 minutes no failure					
	sustained flaming	158 minutes no failure					
insulation		158 minutes no failure					
	pe K – see Fig. 11 in tal joint in vertical buildir	Appendix 1 g supporting construction					
- width of joint - W	= 25 mm						
supporting constr	uction	G = 11,5 cm thick wall made of aerated concrete blocks					
integrity							
	cotton pad	158 minutes no failure					
<b></b>	gap gauges	158 minutes no failure					
<b>N</b>	sustained flaming	158 minutes no failure					
insulation		158 minutes no failure					

Linear joint seal Type L – see Fig. 12 in Orientation – horizontal joint in vertical buildi	Appendix 1 ng supporting construction				
- width of joint - W = 25 mm					
supporting construction	G = 11,5 cm thick wall made of aerated concrete blocks				
integrity					
cotton pad	158 minutes no failure				
gap gauges	158 minutes no fallure				
sustained flaming	158 minutes no failure				
insulation	99 minutes				
Linear joint seal Type M - see Fig. 13 in Orientation - horizontal joint in vertical building	Appendix 1 ng supporting construction				
- width of joint W = 30 mm					
supporting construction	G = 11,5 cm thick wall made of aerated concrete blocks				
integrity					
cotton pad	158 minutes no failure				
gap gauges	158 minutes no failure				
sustained flaming	158 minutes no failure				
insulation	158 minutes no failure				

Linear joint seal Type M' – see Fig. 13 ir Orientation – horizontal joint in vertical building	Appendix 1 g supporting construction					
- width of joint - W = 50 mm						
supporting construction	G = 24 cm trick wall made of aerated concrete blocks					
integrity						
cotton pad	158 minutes no failure					
gap gauges	158 minutes no failure					
sustained flaming	158 minutes no failure					
insulation	158 minutes no failure					
Linear joint seal <b>Type N – see Fig. 14 in</b> Orientation – horizontal joint in vertical buildin	Appendix 1 g supporting construction					
- width of joint - W = 100 mm						
supporting construction	G = 24 cm trick wall made of aerated concrete blocks					
integrity						
cotton pad	158 minutes no failure					
gap gauges	158 minutes no failure					
sustained flaming	158 minutes no failure					
insulation	158 minutes no failure					

# 4. Classification and field of application

#### 4.1. Reference of classification

This classification has been carried out in accordance with Clause 7 of EN 13501-2:2007.

#### 4.2. Classification

The element, SOUDAL linear joint seals is classified according to the following combinations of performance parameters and classes as appropriate.

\*) Key:

E - fire integrity

I - fire insulation

V - orientation: vertical construction – vertical joint

T - orientation: vertical construction - horizontal joint

X - movement capacity - no movement

F - type of splices - field

W - joint widths range (in mm)

#### 4.2.1.1. Linear joint seal Type A see Fig. 1 in Appendix 1

- joint width from 0 to 30 mm
- minimum wall thickness 11.5 cm

R	E	1	W	t	t	-	М	l	S	IncSlow		r
	120							_		11-2-1		
		120										

Resistance to fire class: El 120 – V – X – F – W 0 to 30

## 4.2.1.2. Linear joint seal Type B see Fig. 2 in Appendix 1

- joint width from 0 to 20 mm
- minimum wall thickness 11,5 cm

R	E	İ	W	t	t	-	M	С	IncSlow	sn	ef	r
	120				***************************************							
		60										

Resistance to fire class: El 60/E120 – V – X – F – W 0 to 20

#### 4.2.1.3. Linear joint seal Type C see Fig. 3 in Appendix 1

- joint width from 0 to 25 mm
- minimum wall thickness 11,5 cm

R	E	I	W		t	t	-	М	С	S	IncSlow	sn	ef	ŗ
	120								-					
		60		ļ							į			

Resistance to fire class: El 60/E 120 – V – X – F – W 0 to 25

## 4.2.1.4. Linear joint seal Type D see Fig. 4 in Appendix 1

- joint width from 0 to 40 mm
- minimum wall thickness 11,5 cm

R	E	ļ ļ	W	t	t	-	М	С	IncSlow	sn	ef	r
	120											
		120										

Resistance to fire class: El 120 – V – X – F – W 0 to 40

- joint width from 41 to 50 mm
- minimum wall thickness 11,5 cm

R	E	1	W	t	t	-	M	С	S	IncSlow	sn	ef	Γ
	60												
		60											

Resistance to fire class: El 60 – V – X – F – W 41 to 50

# 4.2.1.5. Linear joint seal Type E see Fig. 5 in Appendix 1

- joint width from 0 to 40 mm
- minimum wall thickness 11.5 cm

R	E	ı	W	t	t	-	М	С	S	IncSlow	sn	ef	r
	120										-		
		120											

\*)

Resistance to fire class: El 120-V-X-F-W 0 to 40

- 4.2.1.6. Linear joint seal Type F see Fig. 6 in Appendix 1
  - joint width from 0 to 30 mm
  - minimum wall thickness 11,5 cm

R	E	İ	W	t	t	-	М	С	S	IncSlow	sn	ef	Г
	120												
		120											

Resistance to fire class: El 120-V-X-F-W 0 to 30

\*)

- 4.2.1.7. Linear joint seal Type G see Fig. 7 in Appendix 1
  - joint width from 0 to 20 mm
  - minimum wall thickness 11,5 cm

R	E		W	t	t	-	М	С	S	IncSlow	sn	ef	r
	90											-	
	<u> </u>	60									İ		

Resistance to fire class: El 60/E 90 – V – X – F – W 0 to 20

- 4.2.1.8. Linear joint seal Type H see Fig. 8 in Appendix 1
  - joint width from 0 to 60 mm
  - minimum wall thickness 11,5 cm

R	E	1	W	t	t	-	М	C	S	IncSlow	sn	ef	Г
	120					_							-
 		60											

Resistance to fire class: El 60/E 120 - V - X - F - W 0 to 60

(\*)

- 4.2.1.9. Linear joint seal Type I see Fig. 9 in Appendix 1
  - joint width from 0 to 100 mm
  - minimum wall thickness 11,5 cm

R	E	1	W	ť	t	-	М	С	S	IncSlow	sn	ef	r
	120			 									
		120											

Resistance to fire class: El 120 – V – X – F – W 0 to 100

#### 4.2.2.1. Linear joint seal Type J see Fig. 10 in Appendix 1

- joint width from 0 to 20 mm
- minimum wall thickness 11,5 cm

F	₹	Ė	ì	W	t	t	 М	C	S	IncSlow	ef	r
	·	120										
	,		120									

Resistance to fire class: El 120 – T – X – F – W 0 to 20

#### 4.2.2.2. Linear joint seal Type K see Fig. 11 in Appendix 1

- joint width from 0 to 25 mm
- minimum wall thickness 11,5 cm

R	Е	Ì	W	t	t	-	М	С	S	IncSlow	sn	ef	r
	120												
		120											

Resistance to fire class: El 120 – T – X – F – W 0 to 25

#### 4.2.2.3. Linear joint seal Type L see Fig. 12 in Appendix 1

- joint width from 0 to 25 mm
- minimum wall thickness 11,5 cm

R	E	I	W	t	t	-	M	C	S	IncSlow	sn	ef	r
	120	-		=	·						2		
		90		_							_		

Resistance to fire class: El 90/E 120 - T - X - F - W 0 to 25

\*)

## 4.2.2.4. Linear joint seal Type M see Fig. 13 in Appendix 1

- joint width from 0 to 50 mm
- minimum wall thickness 11.5 cm

R	Ε	1	W	t	t	_	М	С	S	IncSlow		ef	r
	120										<u> </u>		
		120				<i>;</i>				<u> </u>			

Resistance to fire class: El 120 - T - X - F - W 0 to 50

# 4.2.2.5. Linear joint seal Type N see Fig. 14 in Appendix 1

- joint width from 0 to 100 mm
- minimum wall thickness 11,5 cm

R	Е	ı	W	t	t	-	М	С	S	IncSlow	sn	ef	Г
	120										·····················	٠,	- ·
		120											,

Resistance to fire class: El 120 - T - X - F - W 0 to 100

#### 4.3. Field of application

This classification is valid for the following end use applications:

## 4.3.1. Permitted orientation in accordance with EN 1366-4:2006:

- B vertical linear joint seals in vertical supporting construction joints seals classified in 4.2.1.1 - 4.2.1.9,
- C horizontal linear joint seals in vertical supporting construction --joints seals classified in 4.2.2.1 - 4.2.2.5,

- 4.3.2. Application to supporting constructions elements in accordance with 13.2 of EN 1366-4:2006 made of aerated concrete blocks, concrete, concrete works and masonry with full filled mortar density at least 600 kg/m³ and thickness given in 4.2.
- 4.3.3. Application to straight linear joints with parallel surfaces of elements sealed edges in accordance with Fig. 3.

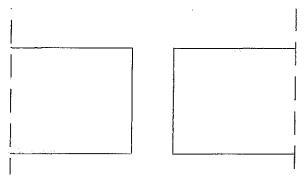

Fig. 3.

#### 5. Limitations

This classification document does not represent type approval or certification of the product.
